

NuTone® Central Vacuum Systems

Welcome to built-in Hoover heaven!

Just when you thought central vacuum cleaner design had peaked, NuTone® has taken things even further. Now you don't have to be rich for your home to look a million dollars because, with an inspired blend of aesthetic simplicity and technological sophistication, NuTone® has come up with an affordable built-in vacuum system to die for. And we really are talking DEEP CLEANING POWER!

Picture this:

You've got a dozen dinner guests arriving in five minutes. The wine's chilled, the table's laid, the stereo's on low, and baby's finally off to sleep. You pull open the oven door. Dinner smells amazing, doesn't it?

Then someone knocks over a bowl of crisps and treads the lot into the living room carpet. Aaaarrgghh!

No problem. **NuTone®** will take care of it

Quickly. Quietly. Effortlessly. Efficiently.

What makes NuTone® Central Vacuum Systems so special?

A NuTone® System is an easy to use master stroke of innovation and design, possessing deep cleaning power that you won't believe. Don't take a chance with other built-in hoovers; this is built-in vacuum cleaning with staggering results. And, what's more, NuTone® Systems have never been so affordable, making this a perfect time to invest.

NuTone® Systems really are now the systems of choice everywhere because, unlike conventional hoovers, they:

- Are quiet, powerful and versatile
- Don't recirculate dust
- Remove 100% of contacted dirt, dust, mites, pollen and other allergens
- Carry all these to a central canister located away from living areas
- Help improve indoor air quality
- Create a healthier living environment

How does the NuTone® Built-in Vacuum System work?

Simply put, a NuTone® built-in Hoover is a lightweight tube, a hole in the wall, a canister you rarely see, a healthy family and a pristine home.

NuTone® built-in Hoovers are selling fast because they've taken the hassle out of vacuum cleaning forever. The greatest gift in life is time. Now you'll have more free time than ever before because with a NuTone® System you simply switch it on, stand back and smile as you watch all your cleaning problems go straight down the tube.

At last, no more carrying!

NuTone® Systems remove all the dirt and debris from your home and send it through tubing built in the walls to a receptacle in an out-of-the-way location like a garage or cellar.

You only carry a lightweight hose and cleaning attachments around the house. The power unit is permanent and out of the way. This means:

- No more trailing cables
- No more lugging a heavy cylinder unit from room to room or up and down stairs

The exciting new range

We don't install for just anyone. We install for you. And you'll love our new range because it features an innovative filtration system that provides:

- Better filtration
- Improved airflow
- Increased efficiency

What's more, the cyclonic version has a tap-n-clear filter, which never needs to be replaced. You simply tap on the top of the filter, and it's as good as new!

Bag one of these, TODAY

The bagged version is equally impressive. The bags are self-sealing and the bag adapter makes changing easy.

The new range features:

- An internal sound suppression system that greatly reduces motor noise
- A motor baffle that helps reduce fan noise
- A uniquely shaped, patent-pending air chamber that increases vacuuming efficiency

And for the even better news, read on...

A NuTone® System is a long-lasting built-in convenience that actually adds value to your home. Imagine that!

This is vacuum cleaning as you like it. Pure performance. Breathtaking efficiency. Effortless precision. Simply insert the hose into a wall inlet and let the powerful suction begin immediately. Remove the hose, the system shuts off, the cleaning's done, and dinner's ready before the doorbell rings.

And the best news of all? Thanks to NuTone®, baby's still sound asleep.
